Firmware Update Package for DOS

This download contains the BIOS and Firmware download for the Intel® Server Board S5000PAL and S5000XAL and associated integrated systems for use with bootable DOS media.

It contains the following firmware versions:

BIOS - R74
BMC FW - R58
FRUSDR - R40

Follow the instructions exactly as written. A complete and successful update will take approximately 20 minutes.

- Copy all system update files to a bootable DOS USB Disk-on-key device
- Verify processor(s) and memory DIMMs are installed in the system
- Plug in AC power cord
- Wait until Status LED stops blinking red/green (~30 seconds)
- Insert bootable DOS USB Disk-on-Key into USB Port (Front or Rear)
- Power on system using "Power" button on Control Panel

Note: Please read the readme file for information on how to run the update package and what batch files are needed to be ran to complete the update process.
